

### Activity: Career Comparison

**Scoring key:** In column 1, give each element a score out of 10 in terms of its overall importance to you. Then, for each career option allocate a score out of 10 for how well each element is satisfied. Next, multiply your overall importance score by the satisfaction score given for each career option to arrive at a total score for each element, and for each career option. Finally, add up the points in each of the columns to arrive at a total score for each career option.

		Career A:		Career B:	
Element	Overall Importance (score /10 for each element)	Career Option A (potential satisfaction /10)	Career Option A Total Score /100 (overall importance x potential satisfaction)	Career Option B (potential satisfaction /10)	Career Option B Total Score /100 (overall importance x potential satisfaction)
Benefits offered by this career meet my expectations					
The type of job is a good match with my career interests					
The type of job is a good match with my skills
